REAL RESULTS

QuickCut™ Casing-Exit System Reduces Rig Time in First Use in Colombia

Objectives

- Increase production by establishing a lateral in an existing vertical wellbore.

Results

- Weatherford's hydraulically set *QuickCut* whipstock system with a *QuickSet*™ anchor was used to successfully mill the window in one trip. This project represented the first use of the *QuickCut* system in Colombia.

Value to Client

- Use of Weatherford's casing-exit system saved the operator time and money by reducing rig time.

The operator was pleased with the performance of the *QuickCut* system and commented on the ease with which the directional drilling string passed through the window.

The versatile, field-proven *QuickCut* casing-exit system combines a single-trip, full-gauge milling system with multiple anchor options. The results are faster, more reliable exits with reduced rig-floor time and increased penetration rates in even the most challenging environments.

Client

Ecopetrol Colombia

Location

Onshore Santander Field

Well Type

Re-entry

Casing

9 5/8-in., 53.5-lb SD, P-110

Setting Depth

10,030 ft (3,057 m)

Milled and Drilled Length

21 ft (6 m)

On-Bottom Time

11 hours 50 minutes

Products/Services

- Fishing and re-entry
- Hydraulic *QuickCut* whipstock system with *QuickSet* anchor
