REAL RESULTS

QuickCut™ Casing Exit System Reduces Trips, Decreases Cost

Objectives

- Complete a full-gauge casing exit in a single trip.
- Minimize excessive milling times in this formation while retaining mill gauge.

Results

- The whipstock was oriented and set, and the window was milled in a single trip.
- The window and rathole were completed in less than 4-1/2 hr, and gauge loss was minimal.

Value to Client

- Casing exits in this area typically take three to five trips, depending on the abrasiveness of the formation. This exit was completed in a single trip, dramatically reducing the drilling curve for the client.

Client

Anadarko Petroleum

Location

Mischer C-2, Ball Prairie field
Easterly, Texas

Formation

Lower Cotton Valley

Depth

11,971 ft (3,649 m)

Casing Sizes

7-in., 29-lb/ft SD P-110

Hole Size

6-1/8 in.

Number of Trips

1
