QuickCut™ System Mills Window, Drills Rathole in Mediterranean Well to Save Rig Time and Trips

Objectives

- Mill a window in 9 5/8-in. casing and drill a 29.5-ft (9-m) rathole in a single trip.
- Maximize gauge retention on mills, and minimize well possession time.

Results

- Weatherford completed the window and rathole in 3 hr, and the job was performed in a single trip.
- The lead mill was only 1/32 in. under gauge. Flex mill wear was immeasurable.
- Total well possession time was 50.5 hr.

Value to Client

- Experience in operating the *QuickCut* milling system enabled Weatherford's field-service personnel to maximize milling efficiency and gauge retention. The reduced rig time and trips to condition the window resulted in considerable savings for the client.

Formation
Shale
