Standard Flow Controls

D Series Running Tools

The Weatherford's D Series Running Tools are wireline service tools used to install locks and attach subsurface control devices in the appropriate nipples. These particular running tools consist of a Fishing Neck and a Pin Thread Connection on the upper end, and a plunger with skirt housing on the lower end. These are attached to the appropriate lock with shear pins. To retrieve a prong for equalizing operations; most D series running tools are internally threaded. With D series running tools, the lock is set by downward jarring, and is released by upward jarring.

Specifications
