

Lower Polished Bore Receptacle (Lower PBR)

Weatherford's lower polished bore receptacle (lower PBR) has a honed seal bore that provides a means of tying back into a liner with a tie-back seal stem. The lower PBR is usually run below the liner hanger and can be used to isolate the seals in the liner hanger hydraulic cylinder or to tie back tapered liners.

Applications

- Tapered liners that require tie-backs
- Isolation of hydraulic-set liner hanger seals
- Completion PBR for production liners

Features, Advantages and Benefits

- Honed ID provides a reliable seal bore that allows Weatherford's tie-back seal stem to form an effective seal against it.
