

Pickup Sub

Weatherford's pickup sub is run at the bottom of polished stingers to release retrievable packoffs so that they can be retrieved with the running string. The pickup sub is available in a variety of configurations, including models with connections at the bottom end or with profiles for a wiper plug.

Applications

- Liners using a Weatherford RSM or RKC cementing packoff

Features, Advantages and Benefits

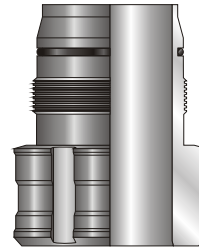

- The profile on the outside of the pickup sub matches and releases the retrievable cementing packoff for operational efficiency.
- Multi-purpose pickup subs are available for operational flexibility.

Specifications

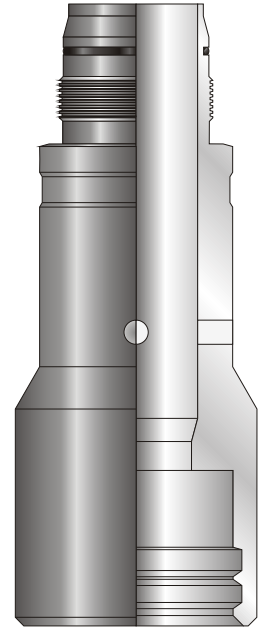

Contact an authorized Weatherford representative.

Options

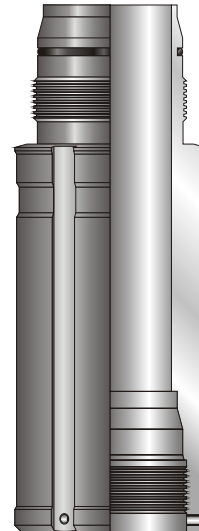

- The pickup sub comes with a blank lower end as standard, but it is also available with a profile for the LWP wiper plug, a profile for the SWP wiper plug, or a bottom connection for special applications.
