

# *Polished Stinger*

Weatherford's polished stinger provides a polished OD against which the Weatherford retrievable seal mandrel (RSM) or RKC cementing packoffs can form a seal. The stinger can also be used to provide a polished OD for sealing against stinger packoffs or drillable packoffs.

## *Applications*

The polished stinger is used in applications where liners apply the RSM or RKC cementing packoff, stinger packoff, or drillable packoff.

## *Features, Advantages and Benefits*

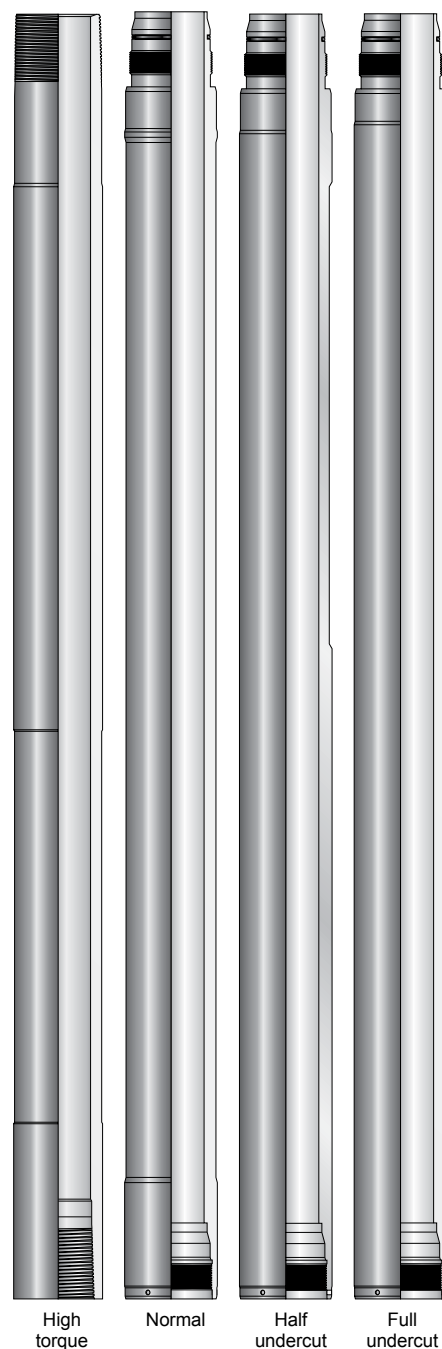

The polished OD provides a reliable seal against all of Weatherford's retrievable, drillable, or stinger packoffs, ensuring that pressure can be built up against a ball seat.

## *Specifications*

For more details on the polished stinger, contact an authorized Weatherford representative.

## *Options*

- The polished stinger is available with a half undercut or full undercut for inner-string applications.
- This tool is also available with standard Acme connections or high-torque Hydril® connections.

Hydril is a registered trademark of Hydril Company.
