

Shear Bonnet

Weatherford's shear bonnet is a liner-top protection system, used to prevent debris from entering the tie-back polished bore receptacle (PBR) during liner run-in, well cleanup, and cementing.

The shear bonnet is run at the top of the running tool string, on a lift sub. MGEL oil gel (or a high-viscosity pill) can be used to prevent debris from accumulating around the running tool, ensuring optimal tool functionality.

Applications

- Any liner or tie-back packer

Features, Advantages and Benefits

- The shear sleeve on the shear bonnet can be mechanically sheared for easy release of running tools that must be declutched.
- The MGEL oil gel (or a high-viscosity pill) prevents debris from accumulating around the running tool, ensuring optimal tool functionality.
