

# *WFT-GT Carrier/Crossover Seal*

Weatherford's GT carrier/crossover seal installs into the top of a tubing hanger's neck or between dual-block-tree flange connections to provide an elastomeric-sealing mechanism between components.

The WFT-GT carrier/crossover seal is Weatherford's standard product offering for an elastomeric-neck seal in dual-tree configurations and some mandrel-type tubing hangers. This seal is an affordable alternative to extended-neck mandrel tubing hangers and is easily installed during completion operations. This seal accommodates tubing sizes ranging from 2-3/8 to 4-1/2 in. (60.3 to 244.8 mm) and has a maximum rated working pressure of 10,000 psi (68.9 MPa).

WFT-GT carrier/crossover seal

## *Applications*

- Used for onshore and offshore operations
- Wellhead ratings to 10,000 psi (68.9 MPa)
- Used for dual-completion-tree configurations
- Used for normal- and critical-service operations

## *Features, Advantages and Benefits*

- The WFT-GT carrier/crossover seal is easily obtainable with availability at all Weatherford wellhead locations worldwide.
- This carrier seal accommodates production tubing sizes to 4-1/2 in. (244.8 mm) and pressure ratings to 10,000 psi. (68.9 MPa).
- The WFT-GT carrier/crossover seal is easy to install, saving rig time, and has a track record of reliability.
- It is available for all API service ranges from AA (general service) through HH (severe service).
