

RAS™ Calibration Tank and Insert

Provides a hydrocarbon point during testing and verification

Applications

- Safe surface testing of RAS tools
- Accurate calibration of RAS tools at field base

Features and Benefits

- Robust calibration module for periodic verification, calibration, and checking of RAS tools in fully powered up state
- Simple to set up
- Space efficient

Tool Description

The Weatherford RAS calibration tank and insert allows for periodic verification of correct tool operation and enables the tool to be safely tested at the surface.

The tank is fabricated from steel and filled with water. The water provides excellent shielding and a known point for the tool verification.
