

# Telemetry Control Unit Protocol Adapter

Serves as a communication adapter between HD and third-party systems

## Applications

- Ability to combine dissimilar telemetry protocols on to single platform
- Facilitates mechanical connection between connections

## Features and Benefits

- Allows combination of HD tools third-party systems
- Simplifies logging objectives by allowing broader range of combinations

## Tool Description

The Weatherford telemetry control unit protocol adapter allows for the connection and data translation of HD services from HD to third-party systems.
