Grade D™ Sucker Rod

Proven technology for greater fatigue tolerance

Applications

- Reciprocating rod lift systems
- PCP lift systems
- Medium-load applications in noncorrosive or inhibited wells[1]

Features and Benefits

- AISI 4142 chromium-molybdenum alloy steel
- API DA alloy standards
- Normalized-and-tempered steel improves mechanical properties for overall toughness and reduced brittleness
- Shot-peened process creates compressive stress that strengthens surface-tension properties for enhanced fatigue life

Tool Description

Weatherford Grade D sucker rods are designed for medium-load applications within inhibited, mildly corrosive wells. Grade D sucker rods conform to API 11B DA specifications and follow strict, Weatherford sucker rod standards for high quality. Like other Weatherford sucker rods, Grade D sucker rods pass through a proprietary shot-peen process, proven to improve fatigue life by up to 10 times. Grade D sucker rods feature fully rolled; cold-formed threads designed to provide a precise and smooth, reinforced-thread structure. Grade D sucker rods are liberally coated with atmospheric inhibitors and carefully palletized in bundles for safe transport and handling.

Weatherford Grade D sucker rods provide enhanced fatigue resistance for long-lasting performance in medium-to-heavy-load wells.
